EDUCATION

Harvard Business School Ph.D. in Business Administration (Area of Study: Accounting and Management)	Boston, USA Expected May 2031
Seoul National University - M.S. in Business Administration (Concentration: Accounting) - Advisor: Prof. Jae Yong Shin	Seoul, Korea Feb 2026
University of Pennsylvania – The Wharton School - B.S. in Economics (Concentrations: Finance and Healthcare Management), <i>summa cum laude</i> - Leave of Absence: Fall 2018, Spring 2019	Philadelphia, USA May 2020

RESEARCH INTERESTS

Corporate Disclosure, Corporate Governance, Compensation & Incentives
Employing empirical methods to test theories drawn from economics, accounting, and finance

RESEARCH EXPERIENCE

Center for Accounting Research, SNU - Research Assistant to Prof. Jae Yong Shin - Analyzed human-capital metrics, such as employee voluntary turnover rates and Blind-based employee satisfaction data, for Korean firms - Engaged as editor for Professor Shin's latest book "Beyond the Paycheck" - Assisted with hosting the 2026 Asia-Pacific Management Accounting Research Symposium	Seoul, Korea 2023 – 2026
--	------------------------------------

ACADEMIC RESEARCH

Working Paper "Insider Trading Policy and Executive Compensation," (with Jason G. Kim) - Presented at the 2026 Korean American Accounting Professors Association (KAAPA) Summer Conference in Seoul (Poster Session), 2026 AAA Management Accounting Section (MAS) Midyear Meeting, and the 2025 Korean Accounting Association Winter Conference Abstract: This study examines how expanded disclosure of insider trading policies affects executive compensation. Using the U.S. Securities and Exchange Commission's (SEC) December 2022 rule mandating public disclosure of firms' insider trading policies, we find that as firms prepare for compliance, abnormal insider-trading profits decline significantly, while total executive compensation increases, suggesting that insider-trading profits function as a form of implicit pay for executives. The increase in total compensation is concentrated among insiders who trade opportunistically, as indicated by whether their transactions follow predictable patterns; this finding aligns with prior research showing that such trades are more informative and therefore generate positive abnormal returns. The compensation adjustment is concentrated in formula-based pay, namely bonuses and equity grants, with little change in salary or option awards. Overall, our results suggest a trade-off between implicit and explicit compensation and provide policy-relevant evidence that transparency reforms can enhance market fairness while inducing changes in compensation design.
